Q1. How many entity classes are there in the schema (org.example.schema.CMS.*)?

There are 5 entity classes. Here is the list:

- CMS.Course
- CMS.Professor
- CMS.Student
- CMS.Teaches
- CMS.Transcript

Q2. What purpose does the cms-ddl.sql file serve? Where is it used?

Cms-ddl.sql defines the CMS database schema that Manifold SQL uses to understand and generate typed Java access to the database. The file contains the SQL data definition language for all CMS tables. The file is connected to the project through cms.dbconfig.

Q3. What are the foreign keys of the transcript table?

Child Column	Reference Table	Reference Column	Meaning
transcript.studentId	student	student.studentId	Each transcript row belongs to an existing student
transcript .courseId	course	course.courseId	Each transcript row refers to an existing course

Q4. How many parameters does the FindStudent query have?

FindStudent accepts 1 parameter: studentId.

Q5. What format is the database stored in?

The project uses an in-memory DuckDB database, which is a column-oriented analytical database.
